Tentex™ Stamped Concrete

Implementing your imagination

No matter your preference be it modern or retro, we can help you get that look.

The addition of a base colour, the addition of an accent colour and stamping a pattern into the concrete are the three procedures used in Stamped Concrete which separate it from other concrete procedures.

Whether it be flagstone, brick, natural stone or any other common exterior looks, there are many ways to personalize your own kind of stamp.

Ever wanted the feel of hard wood floors on the driveway or the look of a brick laid walk path to the house? The limitless array of possibilities combined with great durability and lower cost than natural products makes Tentex New Stamped Concrete technology the right choice for patios, sidewalks, driveways as well as interior flooring.

The method lies in the process of adding texture and colour which gives it the ability to resemble other building materials or other authentic materials such as stone, slate or brick.

Your Decorative Concrete Applicator**PRECAUTIONS AND LIMITATIONS**

The aggregates and other raw materials used to make our decorative concrete are products by nature and therefore are subject to variation in colour, size and shape. The photos in the brochure are for illustration purpose only, and variations in colour and shading may also occur depending on the job conditions, chosen texture and finishing practices employed by your contractor. Tentex is a decorative product and is not intended for purely structural applications. It is not a repair material and all necessary works (including epoxy, crack fill with limitations) should be carried out by a professional in a suitable manner before applications. It is advised to confirm your required colour and texture with your contractor before proceeding with the application works. Colours may vary between resurfacing (spray on) and throw on (dry shake) products due to the variation in formula and application techniques. The printed colors shown in this brochure may vary not fully represent the applied case due to vary printer characteristics.
